#### **DETAILED ACTION**

### Specification

This application does not contain an abstract of the disclosure as required by 37
 CFR 1.72(b). An abstract on a separate sheet is required.

### Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1 – 28 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 - 12 of U.S. Patent No. 6,591,419. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the present Application and U.S. Pat. No. 6,591,419 disclose a conditional access subunit for connection to an IEEE 1394 (fire wire) network, the subunit including:

means to receive AV/C Conditional Access Commands over the IEEE 1394 network from another subunit; and

Art Unit: 2141

Page 3

means to transmit the AV/C responses over the IEEE 1394 network in response to the received AV/C Conditional Access Commands.

## Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

- 5. Claims 1 12, 14 25, and 28 are rejected under 35 U.S.C. 102(e) as being disclosed by Cheng et al. (U.S. Pat. No. 6,040,851) (Small-Format Subsystem for Broadband Communication Services).
- 5.1 Regarding claim 1, <u>Cheng</u> discloses a conditional access subunit for connection to an IEEE 1394 (fire wire) network, the subunit including:

**Art Unit: 2141** 

Page 4

means to receive AV/C Conditional Access Commands over the IEEE 1394 network from another subunit (Abstract; Figs. 1, 3; col. 3, lines 22 - 31); and

means to transmit the AV/C responses over the IEEE 1394 network in response to the received AV/C Conditional Access Commands (Figs. 1, 2A, 2B; col. 6, lines 20 – 23 "DICAMs can be implemented to provide any of the following output signal types or protocols: serial bitstream ... IEEE 1394 (Fire Wire) ...").

5.2 Per claims 4 – 12, and 14 - 24, <u>Cheng</u> does not disclose the specifics involving particular commands.

Cheng does disclose that "the DICAM may also include an interface for 'Smartcards' that implement any of the different varieties of CA functions currently found around the world." (col. 4, lines 58 – 60).

Therefore, these commands are inherent in <u>Cheng</u> since the enable command is commonplace in network scenarios.

- 5.3 Regarding claims 2 and 3, the rejection of claim 1 (paragraph 5.1 above) under 35 USC 102(e) applies fully.
- 5.4 Per claim 25, <u>Cheng</u> teaches a conditional access subunit for connection to an IEEE 1394 network for use in descrambling a transport stream received over the network (Fig. 3, items 112, 126; col. 5, lines 13 25) wherein the conditional access subunit, having descrambled the transport stream, introduces a local scrambling before

Art Unit: 2141

retransmitting the transport stream to other subunits on the network, such that only authorized subunits on the network capable of local descrambling can receive the

5.5 Regarding claim 28, Cheng discloses a tuner device having en embedded conditional access subunit (Fig. 3).

information in the transport stream (Fig. 3, item 130; col. 5, lines 5 - 12).

- 6. Claims 26 and 27 are rejected under 35 U.S.C. 102(e) as being disclosed by Newby et al. (U.S. Pat. No. 5,796,829 (Conditional Access System).
- 6.1 Regarding claim 26, Newby discloses a conditional access subunit for connection to an IEEE 1394 network having a tuner subunit (Fig. 1, item 30; Fig. 3, item 122), the conditional access subunit having means for periodically contacting the tuner subunit to request the received transport stream for a period of time sufficient to allow the conditional access subunit to update the entitlement management messages stored in the conditional access subunit (Fig. 1; col. 3, lines 7 26).
- 6.2 Per claim 27, the rejection of claim 26 (paragraph 6.1 above) under 35 USC 102(e) applies fully

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth R Coulter whose telephone number is 703 305-8447. The examiner can normally be reached on 5 4 9.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rupal Dharia can be reached on 703 305-4003. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
